DLC2400 Network Interface

P/N KA-WEB-I2C-TH

What Does It Do?

Provides an Ethernet connected interface to the DLC-2400 system.

What Do I Need To Make It Work?

- DLC-2400 driver board.
- 7.5VDC.

DLC2400 Network Interface

P/N KA-WEB-I2C-TH

How to Use This Device

Connect 7.5VDC to terminal block TB2

Ensure jumper JP6 is shunted, as illustrated in Figure 1.

Connect a 2x5 ribbon cable from connector J2 to the DLC driver board.

Connect to your network via a standard Ethernet cable plugged into jack J1.

Default network settings:

IP Address: 192.168.1.100

Subnet Mask: 255.255.255.0

Gateway Address: 192.168.1.1

DNS Server: 192.168.1.1 (not used)

To restore default network settings press and hold SW1 for three seconds. LD4 will blink when settings are restored.

Switch from DHCP to static addressing by placing a jumper on JP8

To apply updated static addressing, either reboot the device or re-seat jumper on JP8

Operation:

Communicate with the device by sending UDP packets to the device's IP address on any port

All communications are two or three bytes in length

DLC2400 Network Interface

P/N KA-WEB-I2C-TH

Controller will ACK every UDP message with 0xA5

First send 0x63

Then send the command code

Finally send an argument if required

Commands:

0x65 - Enable light

0x64 - Disable light (will not disable flashing light)

0x69 - Enable flash (overrides steady state light)

0x68 - Disable flash

0x67 - Commit changes

0x6A - Disable all lights (flashing and steady)

0x11 - Set first octet of IP Address

0x12 - Set second octet of IP Address

0x13 - Set third octet of IP Address

0x14 - Set fourth octet of IP Address

0x21 - Set first octet of Subnet Mask

0x22 - Set second octet of Subnet Mask

0x23 - Set third octet of Subnet Mask

0x24 - Set fourth octet of Subnet Mask

0x31 - Set first octet of Gateway Address

0x32 - Set second octet of Gateway Address

0x33 - Set third octet of Gateway Address

0x34 - Set fourth octet of Gateway Address

0x41 - Set first octet of DNS Server

0x42 - Set second octet of DNS Server

0x43 - Set third octet of DNS Server

0x44 - Set fourth octet of DNS Server

DLC2400 Network Interface

P/N KA-WEB-I2C-TH

Arguments:

For enabling or disabling lights and flashing, send the desired bank and lamp number (banks upper five bits 0-15, lights lower three bits 1-6)

For changing network settings, send the octet being changed in hexadecimal

Examples:

To disable lamp 9 - send 0x63 0x64 0x0B, 0x63 0x67

To cause lamp 20 to start flashing - send 0x63 0x69 0x12, 0x63 0x67

To set the static IP Address to 192.168.2.150 - send 0x63 0x13 0x02, 0x63 0x14 0x96, reboot the device

Illustrations

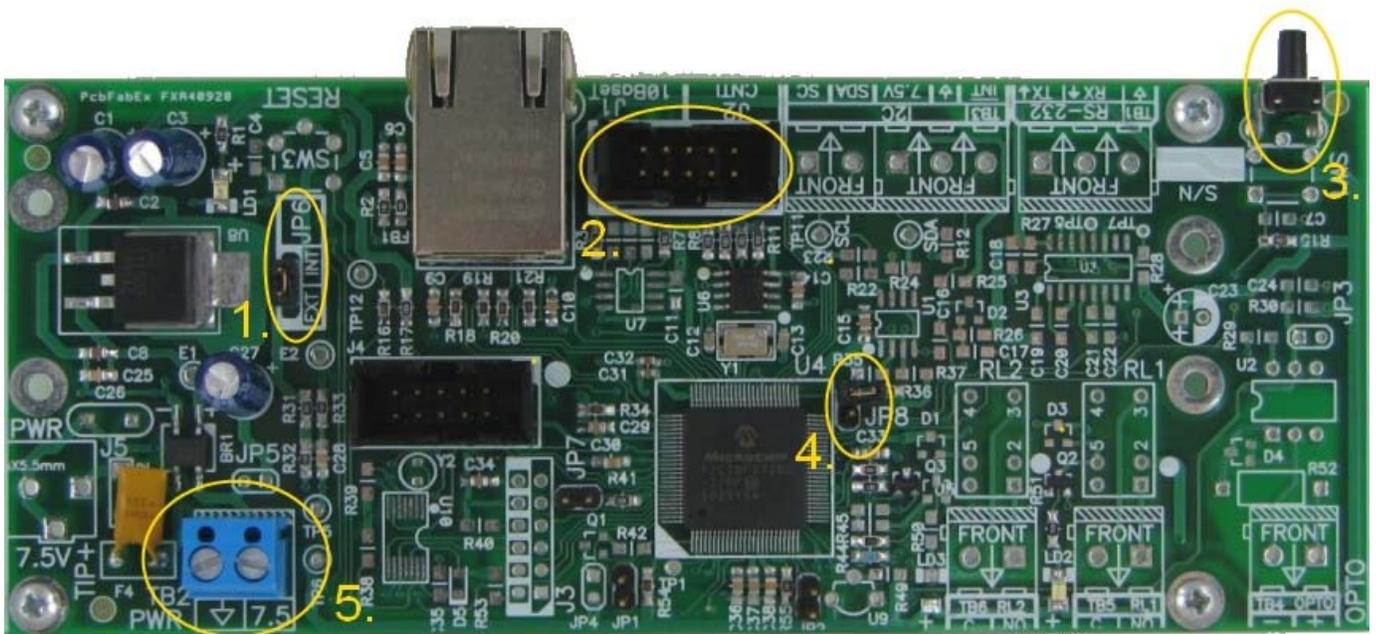

Figure 1:

1. Jumper JP6, leave jumpered
2. Connector J2, connect to DLC-2400 board
3. Switch SW1, hold to reset network settings to default
4. Jumper JP8, jumper to use static addressing
5. Terminal Block TB2, 7.5VDC power input

Technical Specifications

| | |
|--------------------------|----------------------------------|
| Number of Output Ports | 8 |
| Arrangement | Form A, SPST |
| Contact Materials | Optically isolated |
| Input Port Voltage | 5VDC, 5mA minimum |
| Maximum Switching | 100 Hz |
| Max. allowable Voltage | 12VDC |
| Max allowable current | 12mA |
| Operating humidity | 10-80% RH non-condensing |
| Ambient Temperature | 0 to 60 C (with no icing) |
| Unit Weight | About 120 grams (4.3oz) |
| Form Factor | 64 mm W x 252 mm L (2.5" X 9.9") |
| Total Power Consumption | 7.5VDC @ 100mA max. |
| Short-Circuit Protection | 1.5A with resettable PTC fuse |
| Power Indicator | Green LED |
